**VERSION WITH MARKINGS TO SHOW CHANGES MADE**

6. (Amended) The device of [one of claims] claim 1 [to 5], wherein the sense amplifier array includes:

a plurality of sub sense amplifier arrays, each sub sense amplifier comprising a predetermined number of sense amplifiers;

a plurality of local controllers for receiving a column address bit, and outputting a common control signal to a sense amplifier into the predetermined number of sub sense amplifier arrays; and

a global controller for outputting a common control signal into all sense amplifiers in the sense amplifier array.

18. (Amended) The device of [one of claims] claim 12 [to 17], wherein the connection portion between the column selection controller and the data bus unit includes:

a first layer including the column selection controller having a source connected to the main bitline and a drain connected to a first shared layer;

a second layer including a second shared layer for connecting the first shared layer to a data bus line of the data bus unit; and

a third layer including the data bus unit,  
wherein the second layer is disposed below the first layer and the third layer is disposed below the second layer.
